             hepatitis C virus (HCV); (4) inducing targeted RNA interference toward HCV in hepatic cells; (5) inhibiting replication of HCV; (6) a vector comprising a DNA segment encoding the RNA molecule; (7) a host cell comprising the vector of (6); (8) inhibiting replication of HCV; (9) exarying HCV; (9) treating hepatitis C in a subject; (10) a modified sirNA molecule comprising a double-stranded RNA molecule of 10:30 nucleotides in length, which mediates RNA interference toward a target agent or virus and is linked to at least one receptor-binding ligand; and (11) inducing targeted RNA interference in a patient. The modified siRNA molecules are useful for inactivating virus in mammalian cells. The siRNAs are useful for treating hepatitis C virus, hepatitis A
                                                                                                                                                                                                                                     virus, hepatitis D virus, hepatitis E virus, Ebola virus, influenza virus, vicaxirus, necarius, necarius, human papilloma virus, rocaxirus, necarius, human papilloma virus, metapneumoniavirus or coronavirus infections. The methods of the invention can be used to correct or compensate for cellular physiological abnormalities involved in conferring susceptibility to viral infections in patients and/or alleviate symptoms of a viral infection in patients. The present sequence represents the SARS coronavirus nucleotide sequence,

PAIs are large fragments of DNA which comprise pathogenicity determinants. The sequences of the invention are taken from PAI IV and PAI V. PAI IV is located at approximately 64 min (near pheV) on the E. coli chromosome and is greater than 170 kb. PAI V is located at approximately 94 min (at pheR) on the E. coli chromosome and is approximately 160 kb in size. Antibodies specific to the proteins encoded by the PAI open reading frames of the invention can be used in kits to detect uropathogenic E. coli. The proteins are used in vaccines to elicit a protective immune response in an animal to the uropathogenic E. coli
oligotrophic, solid, early germination, alkaline, high temperature, low temperature or maltose culture or polymucleotides stringently hybridising to these sequences. The polymucleotides are useful for monitoring the progress of fermentation and the growth conditions of a fungus, especially of Aspergillus oryzae which is widely used in industrial fermentation. Also monitoring for fungal contamination. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          coli nucleotide sequences - used to develop pathogenic \boldsymbol{E}. coli and to elicit an immune

The present invention describes a method (M1) for determining a toxicological response to an agent, which comprises comparing the expression profile of one or more human toxic response genes to a reference gene expression profile indicative of toxicity, and so determining the presence of a toxic response to the agent. Also ceremining the presence of a toxic response to the agent. Also comparibed: (1) an array comprising one or more polymolecides selected from the genes corresponding to the partial sequences given in ABZ82842 cto ABZ84764, or their fragments of at least 20 nucleotides, or homologues cresponse gene plays a role on toxic response pathways by determining the expression profile of the gene after exposure of cells or a human subject or a known toxic pharmaceutical or industrial agent, comprising (a) exposing cells to an agent or isolating cells from a human subject who exposing cells to an agent or isolating cells from a human subject who can appear or isolating the test gene expression profile to the expression profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or predicting and determining toxicological responses on a cellular, organ or system level. The arrays comprising the human genes are useful for toxic toxicological screening of drugs, pharmaceutical compounds and chemicals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying a stress condition to which a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell
                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

hydratase/3-hydroxyacyl-CoA dehydrogenase bifunctional enzyme (L-PBE).

Also described: (1) an antibody specific for the canine L-PBE polypeptide; (2) an isolated polypucleotide comprising at least 12.

In NO:1 (S1, ADQ38172), or its fragment comprising at least 12.

Consecutive nucleotides of S1 or the non-coding strand complementary to it with the provision that the fragment comprises a mucleotide sequence that differs from any portion of the sequences of 2169, 2154, or 2166 bp (see SEQ ID No:11, 13 and 15, ADQ38182, ADQ38184 and ADQ38186), and from nucleotide sequence their complementary strands by at least one nucleotide; (3) an array of nucleic acid molecules, attached to a solid support, the array comprising concerned sequence that encodes a polypeptide comprising an amino acid sequence that is at least 95% homologous to P1 (see SEQ ID No:2, ADQ38173) and which encodes a polypeptide having L-PBE activity; (5) a method for determining the amount of canine L-PBE polynucleotide present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antiinflammatory; antianaemic; thrombolytic; antilipeemic; antidiarrheic; antiatteriosclerotic; antiasthmatic; immunosuppressive; antityroid; cytostatic; hepatotropic; virucide; dermatological; antidiabetic; nephrotropic; antigout; neuroprotective; thyromimetic; osteopathic; antiarthritic; antipsoriatic; uropathic; ophthalmological; antirheumatic; haemostatic; gene therapy; cell proliferative disorder; cancer; developmental disorder; endocrine disorder; edsorder; autoimmune disorder; gastrointeetinal disorder; liver disorder; autoimmune disorder; inflammatory disorder; liver disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           within a sample derived from a dog; (6) a method for measuring the metabolic response to a test agent in a dog; and (7) a method for determining the amount of canine L-PBE polypeptide present within a sample. The canine L-PBE polypeptide and polymoleotide are useful for measuring the metabolic response to a test agent in a dog. The present sequence encodes human L-PBE, which is used in an example from the present invention. The human L-PBE gene is located on chromosome 3, more
  New isolated canine peroxisomal enoyl-CoA-hydratase:3-hydroxyacyl-CoA dehydrogenase bifunctional enzyme (L-PBE), useful for measuring the metabolic response to a test agent in a dog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human drug metabolising enzyme, DME-8, coding sequence, SEQ ID 21.
                                                                                                                                                            The present invention describes the canine peroxisomal enoyl-CoA-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                    New isolated canine CYPIA2 polypeptide, useful for hybridization assays to detect the capacity of cells to express canine CYPIA2 or for measuring levels of canine CYPIA2 expression.
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to canine CYPIA2 (Cytochrome P450, subfamily I, member A2) protein (ADQ28931) and coding sequence (ADQ28930). CYPIA2 is a microsomal cytochrome P450 dependent monooxygenase which functions in drug metabolism. The sequences useful in hybridization assays to detect the capacity of cells to express canine CYPIA2 or to measure levels of canine CYPIA2 expression. The present sequence was used in a sequence alignment with the canine CYPIA2 coding sequence. Note: This sequence alignment with the canine CYPIA2 coding sequence is the SEQ ID 9 shown in the sequence differs from the SEQ ID 9 shown in Fig 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          roxisomal enoyl-CoA-hydratase/3-hydroxyacyl-CoA dehydrogenase; L-PBE; functional enzyme; enzyme; metabolic response; human; gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel human drug metabolising enzymes, DME-1 to DME-13 (ABP59210-ABP59222) and their coding sequences (ABZ81301-ABZ81313). The sequences are useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME.

CC ARZ81313). The sequences are useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME.

CC atherosclerosis, cirrhosis, paroxymeal nocturnal haemoglobinutia, polycythaemia vera, psoriasis, paroxymeal nocturnal haemoglobinutia, polycythaemia vera, psoriasis, paroxymeal nocturnal haemoglobinutia, cavelopmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), endocrine (e.g. osteoporosis, thrombosis, diabetes), eye disorders (e.g. osteoporosis, diabetes), eye disorders (e.g. osteoporosis, diabetes), eye disorders (e.g. osteoporosis, diabetes), or, cystic fibrosis), gastrointestinal disorders (e.g. dyperlipidaemia, cystic fibrosis), juver disorders (e.g. hyperlipidaemia, cautoimmune thyroiditis, contact dermatitis, Crohn's disease, autoimmune thyroiditis, contact dermatitis, Crohn's disease, cylomerulonephritis, Goodpasture's syndrome, multiple solerosis, osteoarthritis, pancreatitis, Reiter's syndrome, multiple solerosis, cortect of expension, uveitis). They are also useful in the assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of DME. The polynucleotides encoding DME are useful

A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnost a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, endocrine disorder, neurological disorder, developmental disorder, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               invention relates to novel diagnostic and therapeutic polynucleotides

The invention comprises a mammalian embryonic stem cell that has an inactivated ZAQ gene. The invention also comprises a non-human animal that is incapable of expressing the ZAQ gene. The embryonic stem cell of the invention is useful for screening a substance capable of preventing or treating gastrointestinal disorders, endocrinopathy, gonad disease, cancer, immunodeficiency disease, and neurological disease. The non-human animal of the invention is useful for screening a compound which promotes or inhibits the promoter activity of the ZAQ gene. The present DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      progression of liver cancer, hepatocallular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from tumour in a patient, and differentiating metastatic liver cancer from tepatocallular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocallular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying the progression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of bidding to Carcinoma Associated Protein (CAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing acrcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or treating cancers such as leukemia and lymphoma.
                                                                                                                       The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.

/ done lib="Poplar cDNA library from mature xylem"
/ done lib="Poplar cDNA library was made with mRNA isolated from opposite and tension wood tissues corresponding to the mature xylem collected after debarking the stem and pealing the young differentiating xylem with a scalpel. These tissues were collected on 3 different tilted trees grown in the nursery. cDNAs were closed in an oriented way into Sfil (A and B) restriction sites. A one-step conversion of Lambda TriplEx2 to the corresponding pTriplEx2 plasmid was done via site-specific recombination at loxp sites (Clontech, SWART CDNA library construction kit). CDNA inserts were PCR amplified using prings pringers and then sequenced on a ABI3100 Genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CF588852 379 bp mRNA linear EST 05-AUG-2004

/note="Organ: heart; Vector: pBluescript II KS(+); Site_1:
EcoRI, Site_2: Not1; This normalized library was
Constructed_from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
EcoNI, size-selected, and cloned into the NoI and EcoRI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soarse et al., pNAS
(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."

/clone libe="Liver; Vector: pCNS-D2; Site_l: EcoRI;
Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The GDNA vector was adjusted to have about 60nt. The GDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The CDNA libraries constructed by this method are full-length enriched CDNA library. After analyzing and sequencing about 2.000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including Ty promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of blotinylated single stranded RNA by in vitro transcription reaction. The synthesized NNA probes were hybridized with artisense single stranded CDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted CDNA into competent cells E. coli ToplOF' with
